SUMMARY

Software-focused Electrical & Computer Engineer with full-stack and mobile project experience, a CS minor, and a track record of debugging complex systems and writing guides adopted as SOP across teams and stores.

SKILLS

Languages	Java, JavaScript, TypeScript, C/C++, Python, Swift, Kotlin, RISC-V Assembly, MATLAB, Verilog
Tools & Frameworks	React, SwiftUI, Android Studio, PostgreSQL, Plaid API, PyTorch, Linux, Virtual Machines, LTspice, AutoCAD, SolidWorks
Concepts	Full Stack, Backend, Mobile, Embedded Development, Linux CLI, Debugging, Unit Testing, OOP
Languages (Human)	English (Native), Arabic (Fluent)

EXPERIENCE

Electrical Engineer · Portsmouth Naval Shipyard

Feb 2026 – Present

Kittery, ME

- Became the department's Linux SME: trained 15+ engineers on Linux, virtual machines, and the command line, and authored the reference guide that was adopted as SOP.
- Diagnosed and resolved faults in control and instrumentation systems for submarine nuclear propulsion plants, using the Linux CLI and multiple VMs to reproduce failures and isolate root cause.
- Root-caused faults across analog/digital systems, sensors, and embedded electronics by tracing signals through schematics and PCB-level designs, then validated fixes for signal integrity, noise, and reliability.
- Collaborated cross-functionally on upgrades that improved subsystem performance and fault tolerance.

Network Operations Officer (O-1) · U.S. Army (Reserve)

Dec 2021 – Present

Fort Dix, NJ · TS/SCI Clearance

- Administered and supported virtual machine environments giving 75+ users secure remote access to email and applications normally restricted to military computers, and trained users on how the VMs work.
- Served as sole IT support for a 100+ person unit on drill weekends, independently keeping everyone online and resolving hardware, software, network, and account issues in real time.
- Supervised technical teams to keep secure voice, data, and communication networks performing reliably.
- Frequently stepped in for the Commander to lead 100+ person unit, ensuring tasks were completed and personnel stayed aligned.

Technical Specialist · Apple

Feb 2022 – Present

Freehold, NJ

- Diagnosed and resolved software, hardware, and connectivity issues across the full Apple product line, helping around 40 customers a day.
- Authored a troubleshooting guide for legacy devices that became SOP across multiple stores in the region.
- Consistently recognized for keeping appointment times low while maintaining strong customer reviews, without cutting short important interactions.
- Translated complex technical issues into clear explanations for non-technical customers and documented support interactions for follow-up.

EDUCATION

B.S. Electrical & Computer Engineering · Rutgers University

Sep 2021 – May 2025

New Brunswick, NJ

- GPA: 3.20/4.0 · Minor in Computer Science and Military Science

PROJECTS

Summit — Landlord Mobile Application

Sep 2026 – Present

New Mexico State University

- Led a team of CS students in developing a mobile application for a 100+ unit rental portfolio.
- Independently designed and maintained a locally hosted server for the client, enabling secure data storage and retrieval.
- Contributed to the design and implementation of both backend and frontend components, ensuring seamless integration and user experience.
- Implemented secure authentication and authorization mechanisms to protect user data and privacy.

Drink Sync — Hydration Tracker (ECE Capstone)

Sep 2024 – May 2025

Rutgers University

- Co-authored and presented an internationally published IEEE paper on a low cost IoT hydration tracking attachment.
- Developed an Android app in Kotlin using Android Studio that streams sensor data over BLE, with real-time data visualization and gamified goal tracking.
- Implemented microcontroller firmware to process real-time sensor data and calculate fluid consumption.
- Engineered hardware (Arduino Nano, HX711 Load Cells, MPU6050 IMU) to measure water intake and user activity.
